Professional Summary

Aspiring AI developer and Agentic AI specialist with a deep passion for building autonomous AI systems that can reason, plan, make decisions, and take actions with minimal human supervision. Specialized in Python, OpenAI Agents SDK, MCP, and spec-driven development to create production-ready AI solutions that solve meaningful, real-world problems. Full-stack developer with expertise in building user interfaces and robust web applications.

Education

PIAIC — Presidential Initiative for Artificial Intelligence & Computing

A government-backed initiative in Pakistan aimed at training the next generation of AI, blockchain, cloud computing, and IoT professionals. Actively building practical AI skills through project-based learning.

HPGS — Happy Palace Group of Schools (Grade 9)

Balancing formal schooling with intensive self-driven learning in AI and technology.

Technical Skills

AI & Machine Learning: Python, OpenAI Agents SDK, Model Context Protocol (MCP), Prompt Engineering, LLM Techniques, Agentic AI Systems, Claude Code, Gemini CLI

Automation & Integration: n8n, Agent Kit, Spec-Driven Development, Spec Kit Plus

Frontend: React, Next.js, TypeScript, JavaScript, Tailwind CSS

Backend: Node.js, FastAPI, Python, PostgreSQL, Supabase

Key Projects

DebateME

Technologies: Next.js, Python, FastAPI

AI-powered debate platform for practicing argumentation skills against an intelligent opponent with real-time fallacy detection and scoring.

BizzFlow AI

Technologies: TypeScript, Python

A full-stack AI-powered business automation platform built with TypeScript frontend and Python backend.

Restaurant Management System

Technologies: TypeScript, Python

A full-stack restaurant management system with Python backend and TypeScript frontend.

Hackathon Participation

Hackathon 0 — Personal AI Employee

Technologies: Python, Claude Code. Building Autonomous FTEs with Gmail/WhatsApp/filesystem watchers, orchestrator, and Claude Code integration.

Hackathon I — Physical AI & Humanoid Robotics

Technologies: Python, TypeScript, FastAPI. Intelligent textbook platform with Docusaurus frontend, FastAPI backend, and AI agent skills for quizzes, Urdu translation, and personalization.

Hackathon II — Spec-Driven Full-Stack App

Technologies: JavaScript, Node.js. Full-stack application built with spec-driven development methodology.

Hackathon III — Reusable Intelligence & Cloud-Native

Technologies: TypeScript, Python. Cloud-native platform with learnflow app and skills library for reusable AI intelligence components.

Hackathon IV — Course Companion FTE

Technologies: Python, TypeScript, Next.js. AI-powered educational tutor with Zero-Backend-LLM architecture featuring content delivery, quizzes, and progress tracking.
